OBJECTIVE

I am a Computer Science student interested in Cybersecurity, with hands-on expertise in vulnerability assessment, network security, and web application testing. I am seeking an entry-level cybersecurity role where I can apply my skills in threat analysis, penetration testing, and security frameworks to safeguard organizational assets, strengthen digital defenses, and mitigate real-world cyber threats.

EXPERIENCE

Cybersecurity with AI Intern (Virtual)

NIIT Foundations

Aug 2025 – Sep 2025

Bangalore, IN

- Gained hands-on experience in network simulation using Cisco Packet Tracer, learning fundamentals of networking, topology design, IP configuration, and packet flow analysis.

Cyber Security Trainee (On-Site)

CySeck ,FSID, IISc Bangalore

Oct 2025 – Nov 2025

Bangalore, IN

- Engaged in hands-on training, cybersecurity tools, and frameworks under expert mentorship, focusing on practical exposure to real-world security challenges, threat analysis, and digital defense mechanisms.

TECHNICAL SKILLS

Programming & Tools: Python, Bash, Metasploit, Burp Suite, Wireshark, Nmap, Maltego, Rumble, Bitsight, Zap

Web Application Security: SQL Injection, Cross-Site Scripting (XSS)

Network Security & Assessment: Vulnerability Assessment, Network Scanning, Risk Assessment

Frameworks: React, Node.js, Flask

Libraries: pandas, NumPy, Matplotlib

PROJECTS

Quantum Ledger: A Blockchain Simulator | Python, Plotly, Streamlit, Shell, Batchfile, Qiskit

- Developed a comprehensive Streamlit application that demonstrates the impact of quantum computing on blockchain cryptography, featuring real quantum simulations and interactive security analysis.
- Link: https://github.com/avdyuvaraj/Quantum_Computing_Using-Blockchain

Honeypot-Based Threat Intelligence System: | Python, Bash, Cowrie, Honeyd, Wireshark, Grafana

- Developed a Python- and Bash-driven honeypot framework to capture and analyze real-world cyberattacks, with Grafana dashboards visualizing live intrusion trends and attacker behavior.
- Link: <https://github.com/avdyuvaraj/Honeypot-Based-Threat-Intelligence-System.git>

ASL Gesture Recognition System | Python, TensorFlow, CV Zone, ML

- Developed an ASL gesture recognition system, contributed to a research publication. Used CNN models and Python-based pipelines for image classification – similar to NLP/LLM techniques for data interpretation.
- Link: <https://github.com/avdyuvaraj/ASL-recognition-system->

EDUCATION

Atria Institute of Technology

Bachelor of Engineering in Computer Science

Currently with a CGPA of **7.8** over 6 semesters

Bangalore, IN

July. 2022 – May. 2026

ACHIVEMENTS

1. Published research papers in International conferences which will be indexed on December 2025

- Kinetic Sign Expression-A temporal Spatial Neural Network Model for ASL Decoding
- Exploration of Quantum Advantages in Machine Learning
